Consumer Share

Effective July 18, 2024

Consumer Share

Introduction

This feature allows users to **share** a single listing **with the public users** via any **communication channels or social media platform**.

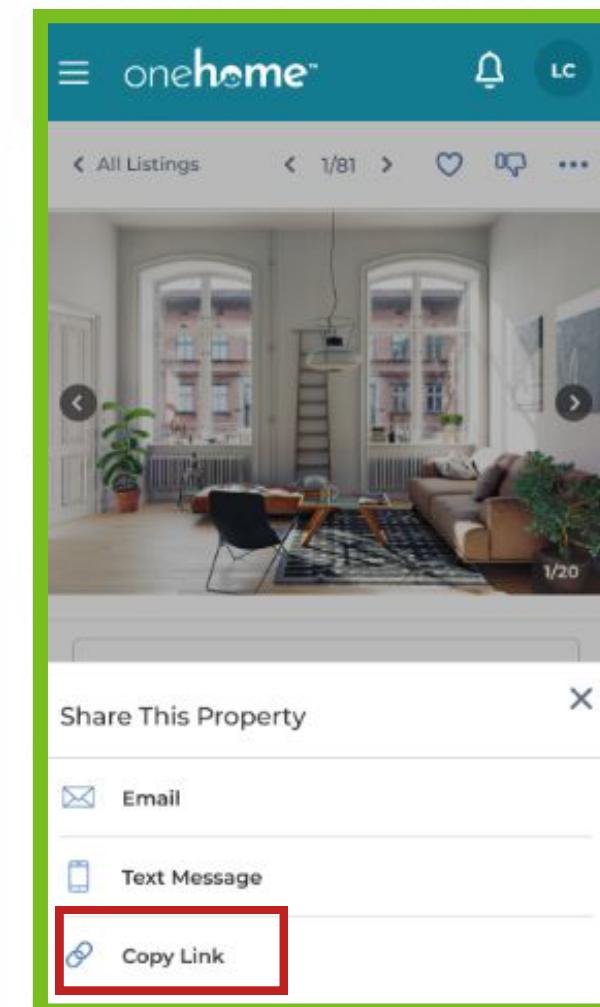

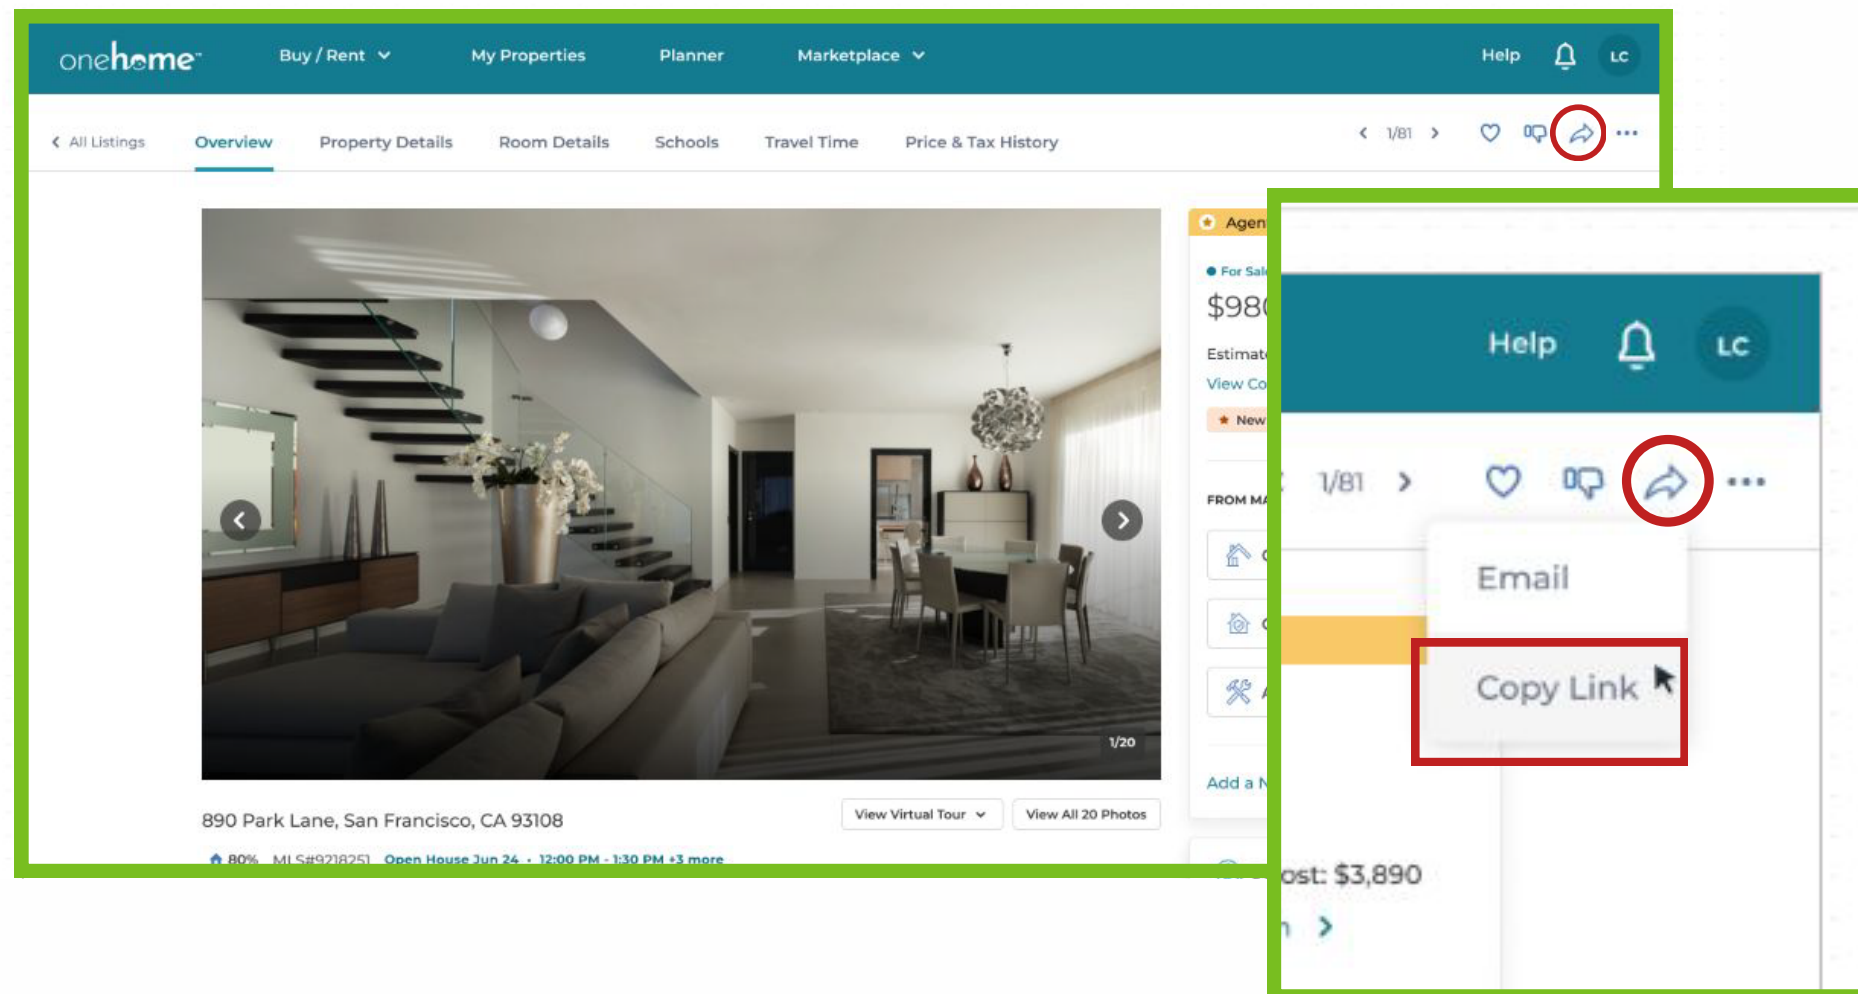

This does not require the user to be working with an Agent or have a OneHome account.

Consumer Share empowers consumers to be able to share listings with a wider audience that could help in decision making and also **increase lead generation and also foster new clients for the Agents**.

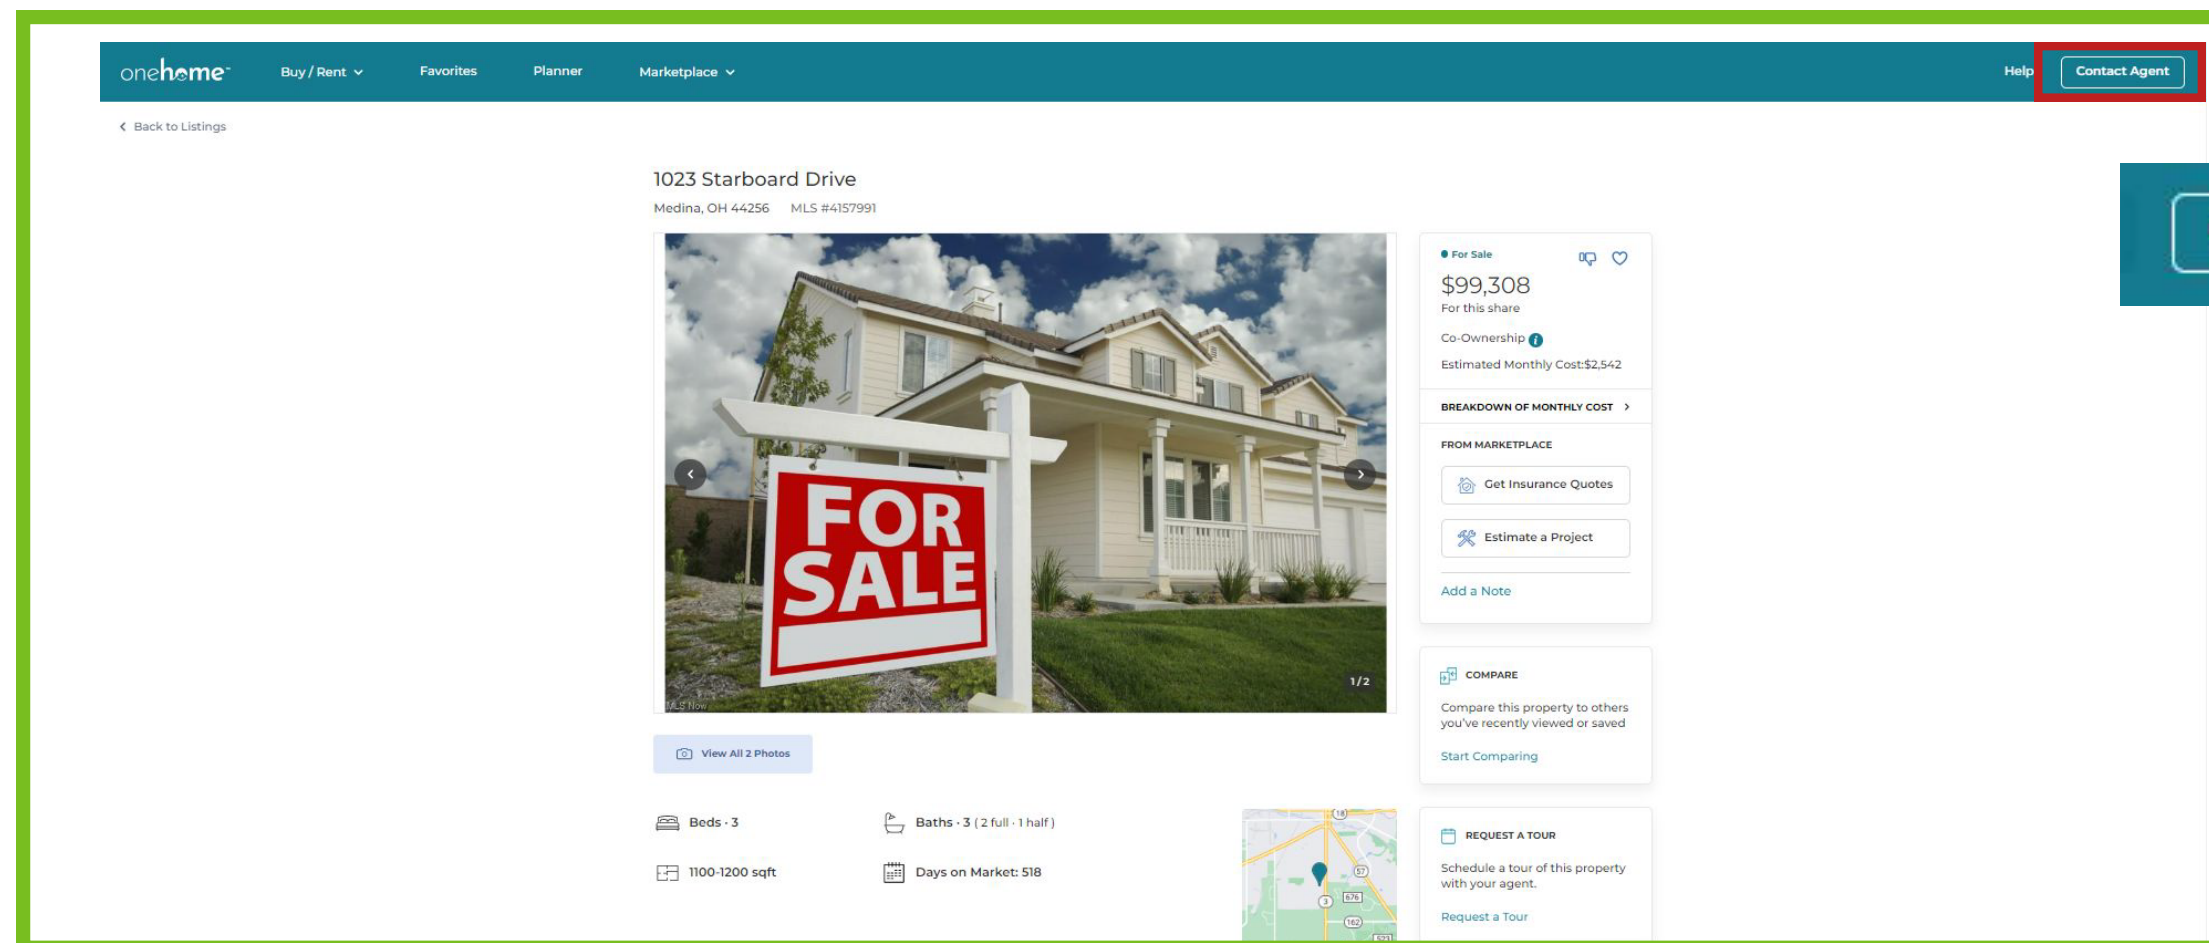

What to Expect

- OneHome will allow users to share individual listings to public users via a single link
- Consumers/Users will select the properties they wish to share, click 'Share Link' to generate a public URL from the property details page which then can be posted/shared via their communication channels and/or social media

What to Expect

- **OneHome** and **non-OneHome users** may view the listings
- Public Users can **navigate through OneHome and view listings**
- Public Users can click on “**Contact Me**” to contact the Agent that shared the listings
- This allows OneHome and Agents to reach a **wider audience** which could **generate more leads and foster new clients**

What to Expect

- Consumers can share a **single listing** with a single link
- The Public View will be public only, and will not recognize an existing OneHome user
- **All data will not be visible via the public link.** Data like price and tax history will be hidden from the Public View, similar to Agent Share
- Authenticated features like favoriting, disliking, PropertyFit score or saving a search **will be disabled** for the Public View
- **“Contact Agent”** will display the Agent’s contact information available from Matrix such as the **phone number and email**. This contact information will be for the **Agent who shared the link with the Consumer** and **not** the listing Agent

Thank you!
